The Value of Sanctuaries, Parks, and Reserves (Protected Areas) as Tools for Conserving Marine Mammals the focal species of concern are as mobile and humpback whale (Megaptera novaeangliae) adaptable as some species of marine mammals. sanctuary in Hawaii are examples of protected For example, there is clear evidence that the areas explicitly established to protect whale feeding distributions of cetacean populations can breeding grounds (see later). undergo major shifts, apparently related to variability in prey densities (Kenney et al. 1996) There is danger that the relative ease of identifying or oceanographic conditions (Forney 1999). The and managing reproductively significant areas for natural (and man-influenced) variability in marine mammals will detract from the equally distribution of mid-water resources on which so crucial problem of protecting areas that are essen many marine mammals depend creates a tial to the populations for other reasons. Animals formidable challenge to sanctuary design. There is need access to adequate food resources, and this also evidence, however, suggesting that cetacean can present enormous challenges to protected area distributions in some areas are better defined by design, especially for marine mammals that fixed features of the physical environment i. e. , depend on pelagic food webs. A novel approach to depth in this instance than by variable aspects of the protection of pelagic systems is presented by environment e. g. , sea surface temperature and Hyrenbach et al.
